

TOUBOIS

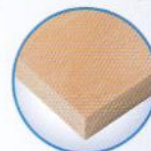

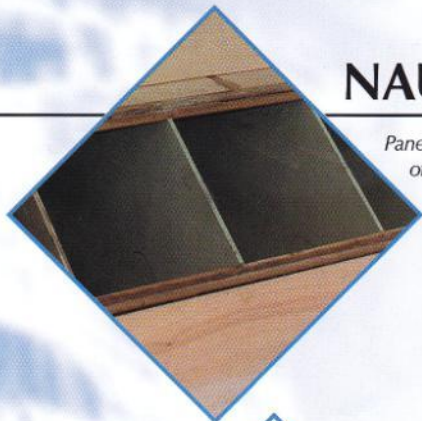

**DECORATIVE,
MARINE,
AND TECHNICAL
PANELS**

NAUTIBOIS®

Panel in long lasting peeled tropical wood with 1,3 mm thick surfaces, ensuring the durability of the panel, its high mechanical resistance and its low distortion in dimensions. Gluing : Class III.

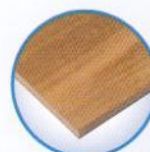

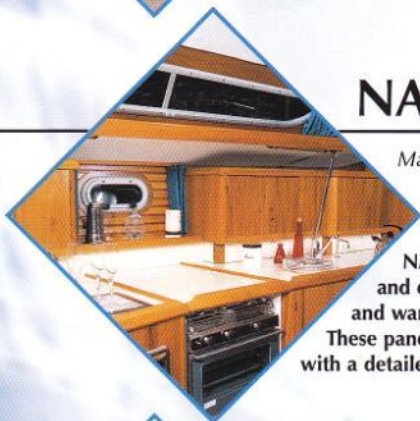

Multi-layer panels, thin plies, for hulls, structures, bridges and boat fittings.

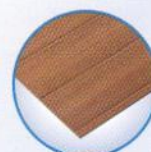

NAUTIDECOR®

Marine multiply (Okoume or similar) re-veneered on 2 sides with a cut veneer 0,6 mm thick. Gluing : class II.

NAUTIDECOR is used for the internal fitting out and decoration of pleasure boats, and it supplies the richness and warmth of wood (quarters, kitchens, bunks and bathrooms). These panels can be cut by digital controls in accordance with a detailed drawing.

SOLID TEAK NAUTIPONT®

Slats of solid teak 7 mm thick connected together by black polyurethane joints for a perfect seal. This flexible panel can be used for curved sections.

For the manufacture of internal and external boat decks, swimming pool surrounds, terraces, balconies or bathroom fittings.

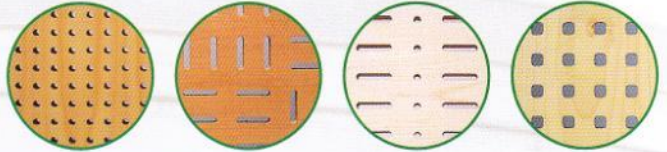

ACOUSTIC PANELS

An acoustic panel is made up of a core in plywood, particle board or MDF, with a fine wood veneer on one surface and the reverse surface balanced. To improve the acoustic performance, this panel is often used with products like rock wool at installation.

For purely decorative interior decoration or to improve acoustics (entertainment rooms, auditoriums, cafeterias, etc...), as a wall covering or on the ceiling.

FLEX & TOUFLEX

FLEX : 2 mm & 3 plies - Decorative plywood intended to be curved.

Cladding for walls, columns, boxes, etc.

TOUFLEX : Peeled plywood which can be curved.

The preparation of curved elements.

TOUPLAX®

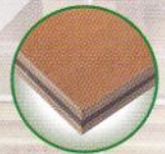

Okoume panels with a lead core or veneered on one surface with a metal sheet glued under high pressure.

TECHNICAL USES : Coachwork, cold rooms, sound insulation and to protect against radiation (in medical, hospital and X-ray surroundings, for electronic or military use and engine rooms, etc...).

FITTING OUT AND DECORATION : Kitchens, individual houses, entertainment rooms, reception halls, stands, etc.

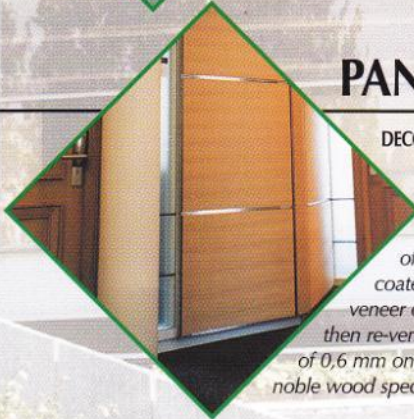

TOUPLAX CHIPBOARD

TOUPLAX MULTI-PLY

PANELS VENEERED WITH NOBLE WOOD SPECIES

DECORATIVE BLOCKBOARD

Blockboard is obtained from the assembly of Poplar and Fir strips coated with a peeled veneer of Poplar or flomba, then re-veneered to a thickness of 0,6 mm on both surfaces with noble wood species.

The manufacture of high quality furniture and book cases.

DECORATIVE PLYWOOD

Plywood made up of peeled tropical woods veneered in strips to a thickness of 0,6 mm on both sides for a decorative effect.

Fitting out of shops and the interior decoration.

DECORATIVE CHIPBOARD

Particle board with an average density of 650 kg / m³ (a mixture of crushed logs, wood shavings and sawdust, to make a compressed mattress used for a panel), veneered on both sides with noble wood species.

Fitting out of shops, interior decoration.

DECORATIVE MDF

A panel with an average density of approximately 800 kg / m³ made up of defibred wood glued under great pressure, then veneered to a thickness of 0,6 mm on both surfaces with noble wood species. MDF offers a surface that is perfectly smooth for a high quality finish.

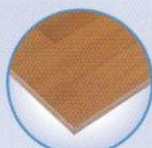

Shop fittings, interior decoration.

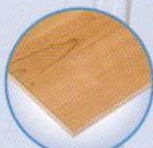

NAUTIPARQUET®

1 mm veneer assembled as strip deck on an Okoume plywood support. Gluing : Class II.

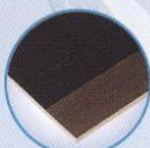

For the interior decks of boats.

IROKO

STRATIPONT®

Okoume marine ply with an 0,8 mm laminate on both sides. Gluing : Class II.

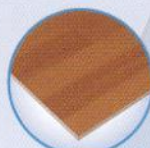

Interior decks of boats. Imitation deck decor. This laminate panel is an excellent solution for wet areas in the boat : kitchen, bathroom. It is also recommended for hire boats because of its ease of maintenance and wear resistance.

NAUTISTRAT

Okoume marine panels re-veneered on both sides with white laminate. Gluing : Class II.

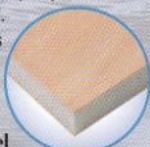

Interior fitting out of boats (kitchen units, shelving, bathrooms).

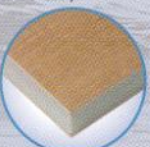

DIVIBOIS®

PVC foam sandwiched between two plywood panels 3 mm thick. This panel improves the mechanical properties considerably, while maintaining a lightened structure. Gluing Class II.

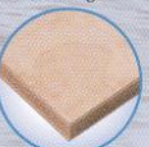

Internal fitting out of boats, for partitions and doors, combining lightness, insulation and rigidity. When weight is the enemy, these panels present many advantages : higher speed, improved autonomy, higher payload and reduced fuel consumption.
